

## > What is Cloud Email Filtering?

Incoming Email Filtering is a gateway solution which filters all inbound email and eliminates spam & viruses before these threats even reach your network. Our advanced filtering solutions achieve a nearly 100% accuracy rate.

## > Why do you need a professional Email Filter?

Reduce the risk of IT network threats!. Email is one of the most common sources of infection for viruses & malware. Some of the recent high profile hacking incidents have all been traced back to infected emails. Get full protection for your Inbox and protect against the latest spam, virus, phishing and malware threats!

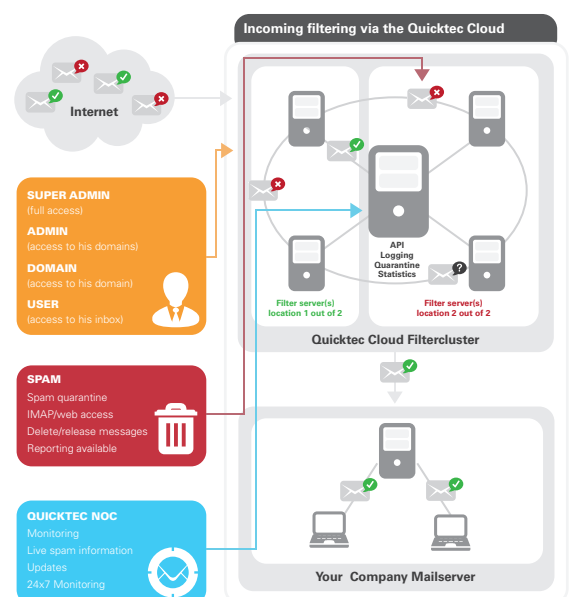

## > How does it work?

Activating the cloud email filter is straightforward. First we will modify some of the settings on your domain name. This change will cause all incoming email to pass through the filter before reaching your email server.

Incoming emails are securely analyzed and scanned by the Cloud cluster in real time. The unique, self-learning and filtering mechanisms will quickly understand the emailing behavior and will get even more accurate over time. Any message detected as spam is moved to the quarantine, which you can monitor with our user-friendly SpamPanel. You can also receive daily email-reports directly to your email client! Improve efficiency and reduce wasted time instead of dealing with spam and focus your energy on your business tasks.

## > Features at a glance:

- Full Inbox protection at unmatched prices
- Extremely accurate filtering
- Easy and quick configuration
- Increase inbound email continuity by adding extra redundancy
- Various reporting options
- Friendly interface to keep you in full control over your email and spam quarantine
- Increase employee productivity
- Compatible with any on-premise email server and Office365

## > Top Features

Our Cloud based filtering solution has a wide variety of features but we have detailed the most important below.

### **No more spam, virus and phishing attacks**

Our filtering solution achieves an industry leading 99.98% email filtering accuracy with close to zero false positives.

### **Save human and tech resources**

Secure your business email platform and save valuable time by not dealing with daily spam messages!

### **Intuitive features**

Implement the most advanced out of the box system on the market, super intuitive and compatible with all mail platforms. The user-friendly GUI has several access levels and options, while you remain 100% in control over your email.

### **Secure email continuity**

Pairone Networks delivery queuing adds an extra redundancy level when your email server cannot be reached due to maintenance or broadband issues. Queued messages are pushed to the destination mail server when it is reachable again, preventing email from being lost or bounced back to the sender. Queued email can be accessed and read via the web-based interface.

### **Business cost savings**

Save on infrastructure resources and waste less time on email threats, while improving employee productivity.

### **Outgoing filtering also available**

Our **Outgoing Filtering** solution checks all outgoing message for spam and viruses before they are sent out, securing your network reputation and preventing blacklisting.
